

Infrared detector modules with preamp

C17212-011, C17213-011, C17214-011

Easy-to-use detector modules with built-in preamps

These are room-temperature modules with an integrated amplifier that can detect infrared light simply by connecting to a DC power supply. Using back-illuminated type InAsSb photodetectors, modules with wavelengths in the 5 μm , 8 μm , and 10 μm bands are available. We welcome requests for custom devices that suit your application.

Absolute maximum ratings

Type no.	Incident light level (W)	Supply voltage V _{cc} (V)	Operating temperature T _{opr} *2 (°C)	Storage temperature T _{stg} *2 (°C)
C17212-011	0.2	±18	0 to +40	-20 to +50
C17213-011	0.17			
C17214-011	0.2			

*2: No dew condensation

When there is a temperature difference between a product and the surrounding area in high humidity environments, dew condensation may occur on the product surface. Dew condensation may cause deterioration in characteristics and reliability.

Note: Exceeding the absolute maximum ratings even momentarily may cause a drop in product quality. Always be sure to use the product within the absolute maximum ratings.

Precautions

- Always use a dual-polarity ±15 V power supply to operate this detector. Never use a single-polarity power supply. Using a single-polarity power supply may cause the amplifier in the detector module to break down.
- The detection elements of C17213-011 and C17214-011 do not have the chip part protected by a window material, etc. Please refer to "Precautions/Unsealed Products" and handle with care.
- Do not drop this product or do not apply excessive shock to it.
